TECHNICAL SKILLS

Backend & Architecture

Go (Golang) • REST APIs • gRPC •
Clean Architecture • DDD •
Modular Monolith • Microservices
Concepts • Authentication &
Authorization • Data Structures &
Algorithms

Databases & Storage

PostgreSQL • Redis • MongoDB •
MinIO

Tools & DevOps

Docker • CI/CD • Git • Swagger •
Kubernetes • Prometheus •
Grafana

Leadership & Collaboration

Code Review • Technical
Mentoring • Cross-functional
Collaboration • Agile/Scrum •
Production Troubleshooting

Alan Shabrandi

Senior Golang Backend Engineer

PROFESSIONAL SUMMARY

Senior Backend Engineer with **7+ years of experience**, including the last **4 years building production systems with Go**. I enjoy designing reliable and maintainable backend systems, with a strong focus on **Clean Architecture** and PostgreSQL data modeling. Throughout my career, I've contributed to system architecture, improved production reliability, mentored engineers, and taken ownership of code quality. I also leverage **AI-assisted workflows** to accelerate development while maintaining high engineering standards.

WORK EXPERIENCE

Senior Golang Backend Engineer

Apr 2022 – Mar 2026

Enterprise Document Management Platform snapdrive.cloud

Stack: Go, PostgreSQL, Docker, Clean Architecture, DDD, gRPC, Redis, MinIO

- Designed and implemented the backend architecture of an enterprise-grade, cloud-native Document Management Platform using Go, adhering to **Clean Architecture**, **Domain-Driven Design (DDD)**, and a **Modular Monolith** approach to ensure long-term scalability and maintainability.
- Led core relational data modeling and **query optimization in PostgreSQL** for large-scale document repositories, ensuring transactional consistency, high data integrity, and efficient search retrieval under heavy production loads.
- Contributed to strategic system design and architectural decisions, establishing clear service boundaries, **gRPC/REST APIs**, and robust data consistency models.
- Built core document management capabilities including **immutable versioning**, metadata management, secure lifecycle management, and comprehensive audit trails for enterprise environments.
- Maintained a high sense of ownership over code quality by leading rigorous code reviews, proposing strategic refactors, and **mentoring junior/mid-level engineers** to foster engineering best practices.

Backend Nest.js Developer

Mar 2019 – Feb 2022

Zibox zibox.io

Stack: NestJS, Node.js, PostgreSQL, Redis, Docker, RabbitMQ

- Designed and implemented scalable backend services using **NestJS** for a high-traffic hyper-local marketplace, successfully serving thousands of daily active users.
- Built and optimized **REST APIs** powering core product domains including marketplace listings, user accounts, orders, messaging, and location-based features.
- Troubleshoot and improved database performance by optimizing complex SQL queries and index strategies in **PostgreSQL**, significantly reducing latency and server load.
- Designed asynchronous workflows and background jobs using **RabbitMQ** to handle heavy operations like notifications and asynchronous order processing.
- Implemented robust authentication, authorization, and **role-based access control (RBAC)** to ensure multi-tenant security across customers, merchants, and administrators.
